

Why Does the San Diego Area and the Rest of California Urgently Need Health Care Reform?

1 Residents of the San Diego Area and California are More Likely to be Uninsured.

Uninsured Rate ¹	
	26.0% ← Residents of Representative Davis' district in San Diego
	24.7% ← Residents of Representative Filner's district in Chula Vista
	21.3% ← Residents of Representative Issa's district in Vista
All Californians →	20.4%
	17.2% ← Residents of Representative Bilbray's district in San Marcos
All Americans →	17.2%
	16.7% ← Residents of Representative Hunter's district in El Cajon

➔ Expand & strengthen coverage so that all Californians have access to quality, affordable insurance choices.

2 Private Coverage is Becoming More Expensive & Less Reliable in San Diego and California.

Like the rest of America, about three of every five Californians have health insurance coverage through their employer, however private coverage is becoming a more expensive and less reliable source of coverage for many Californians because:

- Employment-based coverage has been declining throughout California over the past decade;²
- In the past year, about 67,000 workers in the San Diego metropolitan area have lost their jobs,³ and likely their health coverage too;
- Premiums for job-based coverage in California grew over eight percent in 2008 (compared to under five percent nationally);⁴
- Consumers are not well protected in the individual insurance market and can be denied coverage for pre-existing & chronic conditions;⁵ and
- Californians with private insurance pay an average of 10.5 percent more in premiums to account for the cost of care to the uninsured.⁶

➔ Make private health coverage more secure and affordable for working families and low-income individuals.

3 Public Programs & Clinics Are Important for San Diego's Diverse & Growing Health Care Needs.

- One out of three low-income residents (earning less than \$36,620 for a family of three) of San Diego and Imperial Counties has coverage through Medi-Cal or Healthy Families.⁷
- Access to culturally competent health care services is especially important for the diverse communities of San Diego and Imperial Counties where 32 percent are Latino and eight percent are Asian.⁸
- Almost one million *more* people will be living in the San Diego region by 2030,⁹ and the health care system must be ready and able to handle the increase.

➔ Protect the public health safety net and ensure the system's long-term sustainability by improving the quality of care.
